Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, drawn to coating apparatus, classified in class 118, subclass 420.
- II. Claims 3-12, drawn to method for producing a slot coater/slide coater, classified in class 451, subclass 28.

The inventions are distinct, each from the other because:

Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Group I is directed to an apparatus for coating a photothermographic material with a photosensitive layer liquid coating wherein the lip plane of the slot coater or lip plane of the slide coater has a center roughness R_a which is equal or less than $0.5\ \mu\text{m}$ which may achieved by method other than grinding such as coating surfaces of the slide coater or slot coater. Group II is directed to a method for manufacturing a slot coater or slide coater. The slot coater or slide coater of Group II may have a center-line surface roughness of greater $0.5\ \mu\text{m}$.

A telephone call was made to 7/19/04 on Attorney Bongiovi to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim
